**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Introduction*

1. This action is responses in the APPLICATION 10/669,290 filed on 09-24-2003.

Claims 1-65 are pending.

### ***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S. C. 121:

I. Claims 1-46, drawn to a noise compensation system comprising:

a variable amplifier configured to receive an audio input signal and a source sound processor coupled to the a variable amplifier and an area sound processor configured to receive an ambient sound input signal and an adjustment circuit coupled to the source and area sound processors, configured to perform a comparison of the set of audio output levels with the set of ambient sound levels, classified in class 381, subclass 57.

II. Claims 47-65, drawn to a method of compensating for noise in a listening area, comprising:

measuring characteristics of substantially constant background noise in the listening area; storing the characteristics of substantially constant background noise in the listening area; projecting a test signal into the listening area; calculating an ambient noise level, where the calculating includes: examining the ambient sound in the listening area with regard to the stored acoustic characteristics of the listening area and with regard to the stored characteristics of substantially constant background noise in the listening area, classified in class 381, subclass 94.1.

Art Unit: 2615

3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination group II has separate utility such as subcombination group II can be a method of compensating noise system for other kinds of compensating noise system. See MPEP § 806.05(d).

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
